                                                                                                                                                                                                                                               FUNCTION: THE SHORT COLLAGEN-LIKE REGION IS PROPOSED TO ACT AS TRIMERIZATION SIGNAL LEADING TO THE FULFILLMENT OF THE SYMMETRY REQUIREMENT OF THE MINOR CAPSOMER.

SUBUNIT: THE PRDI VIRION IS COMPOSED OF AN ICOSAHEDRAL PROTEIN COAT, AN INNER PROTEIN-LIPID MEMBRANE, AND A DSDNA GENOME WHICH IS LOCATED INSIDE THE LIPID VESICLE. THE PROTEIN COAT CONSISTS MAINLY OF PROTEIN P3. THE MINOR PROTEIN P5 IS ALSO CONSIDERED TO CONSTITUTE PART OF THE PROTEIN COAT.

SIMILARITY: CONTAINS A COLLAGENOUS DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                G

DOMAIN: ALPHA CHAINS OF TYPE IV COLLAGEN HAVE A NONCOLLAGENOUS DOMAIN: ALPHA CHAINS OF THE FORTH OF THE LORD OF THE G-X-Y REPEATS IN THE LORG CENTRAL TRIPLE-HELICAL DOMAIN (WHICH I CAUSE FLEXIBILITY IN THE TRIPLE HELIX), AND A SHORT N-TERMINAL TRIPLE-HELICAL 7S DOMAIN.

PTM: PROLINES AT THE THIRD POSITION OF THE TRIPEPTIDE REPEATING UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.

PTM: TYPE IV COLLAGENS CONTAIN NUMEROUS CYSTEINE RESIDUES WHICH ARE INVOLVED IN INTER-AND INTRAMOLECULAR DISULFIDE BONDING. 12

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DISEASE: DEFECTS IN COL4A4 ARE ASSOCIATED WITH FAMILIAL BENIGN HEMATURIA (FBH) OR THIN BASEMENT MEMBRANE DISEASE. FBH IS CHARACTERIZED BY PERSISTENT HEMATURIA, AN ELECTRON MICROSCOPICALLY DETECTABLE THIN GLOWERULAR BASEMENT MEMBRANE (GBM) AND AN AUTOSOMAL DOMINANT MODE OF INHERITANCE. RENAL FUNCTION REMAINS NORMAL. IN CHILDREN DIFFERENTIATION BETWEEN FBH AND AS CAN BE DIFFICULT, BECAUSE BOTH DISORDERS ARE MANIFESTED BY PERSISTENT HEMATURIA AND THIN GBM AT THAT AGE.

SIMILARITY: TO OTHER TYPE IV COLLAGENS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1212

                                                                                                                                                                                                                                                                                                                                               ALTERNATIVE PRODUCTS: 2 ISOFORMS; I (SHOWN HERE) AND II; ARE PRODUCED BY ALTERNATIVE SPLICING.

DOMAIN: ALPHA CHAINS OF TYPE IV COLLAGEN HAVE A NONCOLLAGENOUS DOMAIN (NC1) AT THEIR C-TERMINUS, FREQUENT INTERRUPTIONS OF THE G.Y.Y REPEATS IN THE LONG CENTRAL TRIPLE-HELICAL DOMAIN (HHICH M CAUSE FLEXIBILITY IN THE TRIPLE HELIX), AND A SHORT N-TERMINAL TRIPLE-HELICAL 7S DOMAIN.

TRIPLE-HELICAL 7S DOMAIN.

PTM: PROLINES AT THE THIRD POSITION OF THE TRIPEPTIDE REPEATING UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.

PTM: TYPE IV COLLAGENS CONTAIN NUMEROUS CYSTEINE RESIDUES WHICH ARE INVOLVED IN INTER- AND INTRAMOLECULAR DISULFIDE BONDING. 12 THESE, LOCATED IN THE NC1 DOMAIN, ARE CONSERVED IN ALL KNOWN TYPE
                                                                                                                                                                                                                                                                                                                                       IV COLLAGENS.

                                                                                                                                                                                        RT "Structural similarity between bovine conglutinin and bovine lung rt surfactant protein D and demonstration of liver as a site of rt synthesis of conglutinin.";

RT Synthesis of conglutinin.";

RL Immunology 78:159-165(1993).

CC -1- FUNCTION: CONTRIBUTES TO THE LUNG'S DEFENSE AGAINST INHALED MICROORGANISMS. BINDS STRONGLY MALTOSE RESIDUES AND TO A LESSER CENTRACELLULAR REPRACHEDSYL MOIETIES. IT COULD PARTICIPATE IN THE EXTRACELLULAR COMPLEX OF 4 SET OF PULMONARY SURFACTANT.

CC -1- SUBCELLULAR LOCATION: EXTRACELLULAR.

CC -1- SUBCELLULAR LOCATION: EXTRACELLULAR.

CC -1- SUBCELLANEOUS: PULMONARY SURFACTANT CONSISTS OF 90% LIPID AND 10% PROTEIN. THERE ARE 4 SURFACTANT ASSOCIATED PROTEIN: 2 COLLAGENOUS, CARBOHYDRATE-BINDING GLYCOPROTEINS (SP-A AND SP-D) AND 2 SMALL COLLAGENOUS AND SP-D) AND 2 SMALL CLINEDROPHOBEL PROTEINS (SP-B AND SP-C).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

ALPHA 6(JV), EACH OF WHICH CAN FORM A TRIPLE HELIX STRUCTURE
WITH 2 OTHER CHAINS TO GENERATE TYPE IV COLLAGEN NETWORK.

-I- SUBCELLULAR LOCATION: CELL SURFACE (POTENTIAL).

-I- DOMAIN (NC1) AT THEIR C-TERMINUS, FREQUENT INTERRUPTIONS OF THE
G-X-Y REPEATS IN THE LONG CENTRAL TRIPLE-HELICAL DOMAIN (WHICH MAY
CAUSE FLEXIBILITY IN THE TRIPLE HELIX), AND A SHORT N-TERMINAL
TRIPLE-HELICAL 7S DOMAIN.

-I- PTM: PROLINES AT THE THIRD POSITION OF THE TRIPEPTIDE REPEATING
UNIT (G-X-Y) ARE HUDROXYLATED IN SOME OR ALL OF THE CHAINS.

-I- PTM: TYPE IV COLLAGENS CONTAIN NUMEROUS CYSTEINE RESIDUES WHICH
ARE INVOLVED IN INTER- AND INTRAMOLECULAR DISGLETIOE BONDING. 12 OF
THESE, LOCATED IN THE NC1 DOMAIN, ARE CONSERVED IN ALL KNOWN TYPE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      membrane collagen.".

-i- FUNCTION: NEMATODE CUTICLES ARE COMPOSED LARGELY OF COLLAGEN-LIKE PROTEINS. THE CUTICLE FUNCTIONS BOTH AS AN EXOSKELETON AND AS A BARRIER TO PROTECT THE WORM FROM ITS ENVIRONMENT (BY SIMILARITY).

-i- SUBUNIT: COLLAGEN POLYPEPTIDE CHAINS ARE COMPLEXED WITHIN THE CUTICLE BY DISULFIDE BONDS AND OTHER TYPES OF COVALENT CROSS-
SEQUENCE FROM N.A.

```
And tumor growth, plays a critical role in the maintenance of retinal restructure and in neural tube closure.";

RI Hum, Mol. Genet. 9:2051-2058(2000).

C -!- FUNCTION: COLA18A PROBABLY PLAYS A MAJOR ROLE IN DETERMINING THE RETINAL STRUCTURE AS WELL AS IN THE CLOSURE OF THE NEURAL TUBE.

C -!- FUNCTION: ENDOSTATIN POTENTLY INHIBITS ENDOTHELIAL CELL PROLIFERATION AND ANGIOGENESIS. MAY INHIBIT ANGIOGENESIS BY BINDING TO THE HEPARAN SULPHATE PROTEOGLYCANS INVOLVED IN GROWTH FACTOR SIGNALLING (BY SIMILARITY).

C -!- TISSUE SPECIFICITY: PRESENT IN MULTIPLE ORGANS WITH HIGHEST LEVELS FORM/NC-493 (SHOWN HERE); ARE PRODUCED BY ALTERNATIVE SPLICING.

C -!- TISSUE SPECIFICITY: PRESENT IN MULTIPLE ORGANS WITH HIGHEST LEVELS IN LIVER, LUNG AND KIDNEY.

C -!- TISSUE SPECIFICITY: PRESENT IN MULTIPLE ORGANS WITH HIGHEST LEVELS OF THE THIRD POSITION OF THE TRIPEPTIDE REPEATING UNIT (G-X-Y) ARE HUDROXILATED IN SOME OR ALL OF THE CHAINS AND AND AND SECRETIVAL DESCREATION WITH RETINAL DESCREATE OF KNOBLOCH SYNDROME (KS);

C -!- DISEASE: DEFECTS IN COL18A1 ARE A CAUSE OF KNOBLOCH SYNDROME (KS);

C -!- SIMILARITY: BELONGS TO THE MULTIPLE ENCEPHALOCELE.

C -!- SIMILARITY: BELONGS TO THE MULTIPLE ENCEPHALOCELE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RX MEDIINE-20289799; PubMed-10830953;

SUBUNIT: TRIKERS OF IDENTICAL ALPHA 1(III) CHAINS. THE CHAINS ARE
LINKED TO EACH OTHER BY INTERCHAIN DISULFIDE BONDS. TRIMERS ARE
ALSO CROSS-LINKED VIA HYDROXYLYSINES.
PTM: PROLINES AT THE THIRD POSITION OF THE TRIPEPTIDE REPEATING
UNIT (G-X-Y) ARE HYDROXYLATED IN SOME OR ALL OF THE CHAINS.

LIPIG Res. 36:1305-1314(1995).

-I- FUNCTION: MEMBRANE GLYCOOPROTEINS IMPLICATED IN THE PATHOLOGIC DEPOSITION OF CHOLESTEROL IN ARTERIAL WALLS DURING ATHEROGENESIS.
TWO TYPES OF RECEPTOR SUBUNITS EXIST. THESE RECEPTORS MEDIATE THE ENDOCYTOSIS OF A DIVERSE GROUP OF MACROMOLECULES, INCLUDING MODIFIED LOW DENSITY LIPOPROTEINS (LDL).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SEQUENCE OF 349-458 FROM N.A.
